

CodeCell Event Report

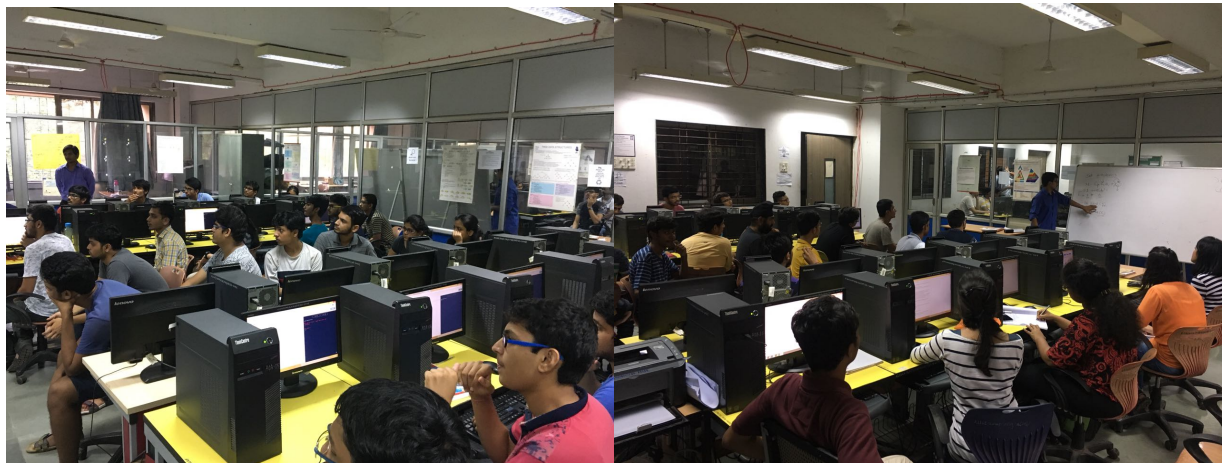

Workshop on Problem Solving Approach to Competitive Programming

Date: 26th and 27th July, 2017

Time: 5:15 PM - 7:30 PM

Venue: B - 216, 217, 315, 316

Total Participants: Day 1: 52(SY-LY, All branches), Day 2: 32(SY-LY, All branches)

Description:

Standard Template Libraries is a concept every programmer should know in order to make their logic stronger, and also to optimize their code. In this workshop, we taught the students some basic containers of STL which will help them extensively in solving programming questions and in competitive coding contests to come. It was a hands on workshop where students were guided through solving three problems on [codechef](https://www.codechef.com). The solutions to these problems can be referred by the students on our [github](https://github.com) repository for this workshop.
